TRAUMATIC BRAIN INJURY AND CEREBRAL VASCULAR INJURY
THIS SEMINAR IS AT NO COST AND PROVIDES 3 HOURS OF CONTINUING EDUCATION

DATE:
JULY 13, 2016
9:00 AM – 12:00 PM

LOCATION:
Salinas Valley Memorial Healthcare System
DRC – A/B
611 Abbott St
Salinas, CA 93901

COURSE DESCRIPTION:
Using Your Mind To Save Their Brain
The primary cause of an injury to the brain may be from blunt force trauma, such as a vehicle accident or from an aneurysm that has ruptured. This patient can present with a mild, altered level of consciousness to posturing with a tonic-clonic seizure. Each type of injury is similar, however, unique in its management. What we do from that moment forward CAN, and often WILL, make a difference to that brain for that person.

Please join us for an in-depth look at the pathophysiology of the injured brain. Learn how the body and brain attempt to adapt to the assault. The primary injury has occurred, and your focus will be on preventing the secondary brain injury that follows. Each of us who will be caring for that victim has a part in that patient’s potential outcome.

INSTRUCTOR:
Suz Roehl, RN - Critical Care Flight Nurse with CALIFORNIA Shock Trauma Air Rescue (CALSTAR).
Suz has 28 years of critical care and emergency nursing in a diverse background of Pediatric ICU, Burn ICU, CV ICU, Level 1 Trauma ED, Flight Nursing, and Clinical Nursing Educator for ICU and ED.
