Shasta College Fire Technology & EMS Program

S-219: Ignition Operations

This course of study presents the application of safety considerations involved in a firing operation. It also provides the student with the necessary information to operate, maintain and use firing devices, and to use backfire as an indirect attack method against a rapidly spreading wildfire. The student will also learn the proper application of fire suppression firing methods and practices.

COURSE

FTWO 125, Section S2170
